

R&T BiCMOS run2

Prepared by: Bao TON

DESCRIPTION

This ASIC, fabricated using IHP technology, integrates three distinct circuits designed for cryogenic operation (77 K). It features two low-noise differential amplifiers: a fully integrated version with on-chip resistors and a flexible version utilizing external resistors. Both amplifiers deliver an ultralow noise floor of $1 \text{ nV}/\sqrt{\text{Hz}}$ and are optimized for promising low flicker noise at cryogenic temperatures. The bandwidth is specified at 25 MHz for the on-chip variant and 50 MHz for the external resistor configuration. Additionally, a large-geometry

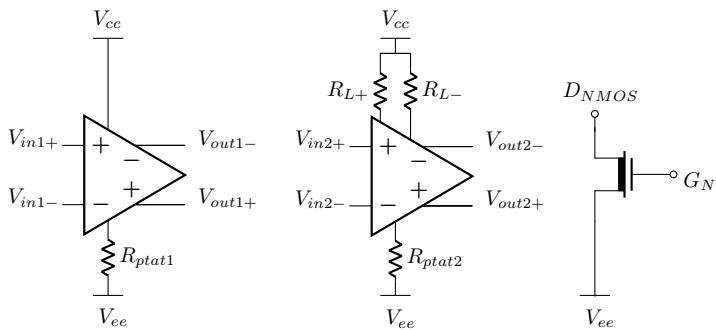

Low Noise, Cryogenic Differential Amplifier

NMOS transistor ($W/L \approx 190,000$) is included for discrete characterization.

ABSOLUTE MAXIMUM RATINGS

Total Supply Voltage (V^+ to V^-)	5.15V
Input Current (Note 2)	$\pm 40 \text{ mA}$
Operating Junction Temperature Range (Note 5)	-40°C to 125°C
